

UNITEx™-D VS

Ex db IIC, Ex eb IIC, Ex ta IIIC, Ex nR IIC

CAPTIVE COMPONENT GLAND® WITH VARIABLE DELUGE SEAL™ for Multi Armoured or Lead Sheathed Cable

Features and Benefits

- For indoors, outdoors, Group II, III, Zone 1, 2, 20, 21 and 22 hazardous areas.
- Two-part handling, no loose parts
- Freely rotating captive cone and inspectible cone ring provides an armour clamp and earth bond on a steel wire, aluminium, braid and tape armour.
- Patented disconnect system that allows inspection of armour clamp and inner seal after assembly.

- Provides 360° earthing to copper tape or lead sheath.

 With a patented Variable Deluge Seal™ as standard.

 Factory fitted with a specially formulated elastomeric seal for Built-in Safety™, seals on the inner and outer sheath of the cable to IP65/66/68.
- Precision manufactured from high-quality brass (Marine Grade Electroless Nickel Plated™) available in stainless steel
- Supplied with a thread sealing gasket (parallel threads only).

Conditions for Safe Use - X

The cable glands shall only be used where the temperature, at the point of entry, is between -60°C to +95°C (standard seal & HDPE sealing gasket), -60°C to +100°C (standard seal and Nylon sealing gasket) or -60°C to +160°C (extreme temp. seal & PTFE sealing gasket) depending on seal and gasket used. Braided cables must only be used on fixed installations where the cable is clamped or stress applied to the cable in the gland is prevented.

Note: According to IEC 60079-14, 10.6.2: An Ex d gland will only maintain Ex d integrity when used with substantially round, compact and filled cable. If not a CCG VORTEX® barrier gland should be used.

All dimensions except NPT are in mm. Intermediate thread sizes are available on request. NPT threads should be tightened 'wrench tight'

FITTING INSTRUCTIONS

Metric Illustration

UNITEx - D VS GLAND

ENCLOSURES AND EQUIPMENT TO WHICH CABLE GLANDS ARE FITTED:-

- Must be made from materials which are compatible with the cable gland materials. Have a sealing area around the cable gland entry point with a surface roughness
- Ra 6.3 μm.
- Have entries that are perpendicular to the enclosure face in the area where the cable gland will seal to within 2.5°.
- Are sealed using the supplied sealing gasket (parallel threads) or by fully tightening into a threaded entry (tapered threads). Note that for tapered threads the IP rating can be improved to IP68 with the use of a suitable thread sealant.

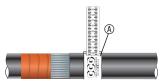

MUST HAVE THREADED ENTRIES

The same thread size as the cable gland. (Thread adapters should be used to correct

- any mismatch).
- With a thread tolerance of metric class '6H' or equivalent,
- Where the thread length is a minimum of 10mm for Ex d applications or 3mm for all other applications

OR CLEARANCE HOLES (not Ex d)

- Where the hole size is the thread nominal size with a tolerance of +0.1 to +0.7mm. (e.g. the clearance hole for an M20 thread will have a diameter between 20.1mm and
- Through material that is between 1mm and 12mm thick. (Thicker materials can be accommodated using glands with extended entry threads.)

1. For accurate sizing, use a CCG Dimension Tape (A) on the inner and outer cable sheath.

Gland Size	Armour Length	Gland Size	Armour Length	Gland Size	Armour Length	Gland Size	Armour Length
00-16ss	20.0	3s-32s	30.0	6s-63s	45.0	9-90	50.0
00-20ss	20.0	3-32	30.0	6-63	45.0	10-100	60.0
0-20s	20.0	4s-40s	30.0	7s-75s	50.0	11-115	60.0
1-20	25.0	4-40	30.0	7-75	50.0	12-120	60.0
2s-25s	25.0	5s-50s	35.0	8-80	50.0	13-130	60.0
2-25	25.0	5-50	35.0	9s-90s	50.0		

Cut back the cable outer sheath to expose the armour to a length as per the table above. Cut the PVC sheath exposing the copper tape or lead sheath to the length of the inner ②

To maintain IP66/68, ensure the gasket ${\Bbb Q}$ is in place. Screw the inner ${\Bbb Q}$ into the apparatus. Tighten the inner 2 to the installation torque using a CCG

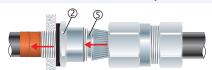

Alternative installation through an unthreaded entry.

If the apparatus is untapped use a locknut.

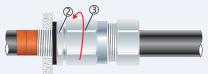

If the gland has NPT entry threads fitted to a threaded entry then IP68 (2m) can be achieved by applying one of the following tested and approved grease types to the thread:- Renolit Lubrene CA700 or LX220 EP2, Renolit LC-WP2 or Moly LX2, or Dow Corning 4 Electrical Compound.

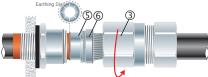

4. Pass the outer nut @ and the body @ over the cable.

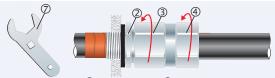

Pass the cable end through the inner ② ensure the copper tape does not unravel. Splay the armour wires over the cone ⑤.

Tighten the body ③ onto the inner ② until hand tight, then tighten with a CCG Spanner ② with ¾ turn to lock the armour between the cone ⑤ and the cone ring 6

Unscrew the body ③. Check that the armour has locked between the cone ⑤ and cone ring ⑥. (0-Ring on the cone ring ⑥ is sacrificial). Check the copper tape or lead sheath has passed through and makes 360° contact with the earthing disc.

Tighten the body ③ onto the inner ② to the installation torque using a CCG Spanner ⑦. The Variable Deluge Seal™ will engage automatically as the body is tightened onto the inner ②. Tighten the outer nut ④ to produce a moisture proof seal by turning until the seal makes contact with the outer sheath of cable and then make one full turn.
