

# **POSI GRIP**<sup>®</sup>

Ex db IIC, Ex eb IIC, Ex ta IIIC, Ex nR IIC

### **COMPRESSION GLAND for Unarmoured Cable**

#### Features and Benefits

- For highly corrosive Group II, III, Zone 1, 2, 20, 21 and 22 hazardous areas
- Complete with a gripper seal, deluge proof seal and elastomeric inner seal for complete explosion and ingress protection IP65/66/68.
- Brass parts are encapsulated in and protected by a corrosion-resistant material.
- Marine-grade electroless nickel plated entry threads.
- Precision manufactured from high-quality brass (Marine Grade Electroless Nickel Plated™).
- Supplied with a thread sealing gasket.

#### Technical Data

Туре:	Posi Grip®					
Gland Material:	Brass (Marine Grade Electroless Nickel Plated™) encapsulated in Nylon or Glass					
	Reinforced Polyester					
Seal Material:	Standard Thermoset Elastomer					
Cable Type:	Unarmoured					
Sealing Area:	Outer Sheath					
Optional Accessories:	Adaptor, Reducer, Locknut and Serrated Washer					
Note:	The installer should ensure that the materials are suitable for the installation					
	environment.					
Standards and Certific	ations					

-20°C to +95°C (Glass reinforced polyester)

-60°C to 100°C (Nylon)

#### Conditions for Safe Use - X

- The cable glands shall only be used where the temperature, at the point of entry is between -20°C to +95°C (glass reinforced polyester) or -60°C to 100°C (Nylon).
- The cable gland may only be used on fixed installations where the cable is clamped or stress applied to the cable in the gland is prevented.
- The gland may only be installed / dismantled using CCG Posi™ Spanner.
- According to IEC 60079-14, 10.6.2: An Ex d gland will only maintain Ex d integrity when used with substantially round, compact and filled cable. If not a CCG VORTEx® or QuickStop-Ex® barrier gland should be used.

## FITTING INSTRUCTIONS **Metric Illustration**

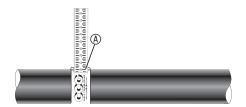

## **POSI GRIP<sup>®</sup>GLAND**

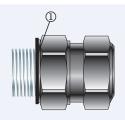

ENCLOSURES AND EQUIPMENT TO WHICH CABLE GLANDS ARE FITTED:-

- Must be made from materials which are compatible with the cable gland materials. Have a sealing area around the cable gland entry point with a surface roughness < Ra 6.3 um.
- Have entries that are perpendicular to the enclosure face in the area where the cable gland will seal to within 2.5°.
- Are sealed using the supplied sealing gasket.
  MUST HAVE THREADED ENTRIES
- The same thread size as the cable gland. (Thread adapters should be used to correct any mismatch).
- With a thread tolerance of metric class '6H' or equivalent.
- Where the thread length is a minimum of 10mm for Ex d applications or 3mm for all other applications
- OR CLEARANCE HOLES (not Ex d)
  - Where the hole size is the thread nominal size with a tolerance of +0.1 to +0.7mm. (e.g. the clearance hole for an M20 thread will have a diameter between 20.1mm and 20 7mm)

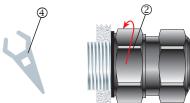

Through material that is between 1mm and 12mm thick. (Thicker materials can be accommodated using glands with extended entry threads)

1. For accurate sizing, use a CCG Dimension Tape (A) on the outer cable sheath.

2. To maintain IP66/68, ensure the thread gasket ① is in place.

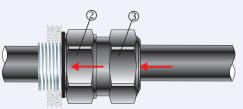

3. Screw the gland unit into the apparatus. Tighten the nipple nut  ${}^{\textcircled{O}}$  as per torque value using a CCG Posi Spanner ④.

\* Only CCG Posi<sup>™</sup> Spanner to be used for installation torque.

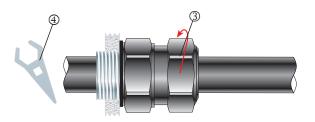

Alternative installation through an unthreaded entry.

If the apparatus is untapped use a locknut.

4. Pass the cable end through the outer nut ③ nipple nut ②.

5. Tighten the outer nut ③ using a CCG Posi Spanner ④ as per torque value using a CCG Posi Spanner ④ to produce a seal and grip on the cable. \* Only CCG Posi<sup>™</sup> Spanner to be used for installation torque.
