E1W INSULATED CAPTIVE COMPONENT GLAND®

1. For accurate sizing, use a CCG Dimension Tape **(A)** on the inner and outer cable sheath.

2. Remove the locknut **(1)** and the female insulator ring **(2)**. To maintain IP66/68 ensure the gasket **(3)** is in place.

3. Insert the male insulator entry **(4)** into the cable entry of apparatus.

4. Screw the female insulator ring **(2)** back against the apparatus (maximum of 10mm thickness). Screw the locknut **(1)** back against the female insulator ring **(2)**.

5. Pass the outer nut **(6)** and the body **(5)** over the cable.

6. Pass the cable end through the inner and splay the armour wires **(7)** over cone **(8)**.

7. Screw the body **(5)** onto the inner and tighten the body **(5)** to lock the armour between the cone **(8)** and the cone ring **(9)**.

8. Unscrew the body **(5)**. Check that the armour has locked between the cone **(8)** and the cone ring **(9)**. (O-Ring on the cone ring **(9)** is sacrificial)

9. Tighten the body **(5)** onto the inner. Tighten the outer nut **(6)** to produce a moisture-proof seal by turning until the seal makes contact with the outer sheath of cable and make one full turn.
