To whom it may concern

CCG PRODUCTS

CCG cable glands and junction boxes have been extensively used on projects executed in the Natref (National Petroleum Refiners of South Africa) for many years. Natref is a crude-oil fed refinery situated in Sasolburg (Free State, South Africa) which is jointly owned by Sasol (63.64%) and Total South Africa (33.36%), with an output of 108 500 barrels per day.

The most recent upgrading and expansion was in the order of R750 million.

CCG is a trusted supplier of cable glands and junction boxes to both Natref and the Sasol Group of Companies and as such is on the Approved Suppliers List. Only CCG cable glands are permitted to be installed in hazardous areas classified within the Sasol facilities both in South Africa (Sasolburg and Secunda Sites) and abroad.

CCG offer excellent product support and proactive technical training, both in the selection of the correct product for the respective application and in installation methods and techniques.

Yours faithfully
